"Q" systems range

The Autobeltqueue-system is based on a self-tensioning belt that retracts into an extruded aluminum post. Belt span approximately 1600 mm the plastic end wedge slides easily into the aluminum-channeled post. Some of the advantages of this system are: no loose parts or belts to be lost when stored, easily set up.

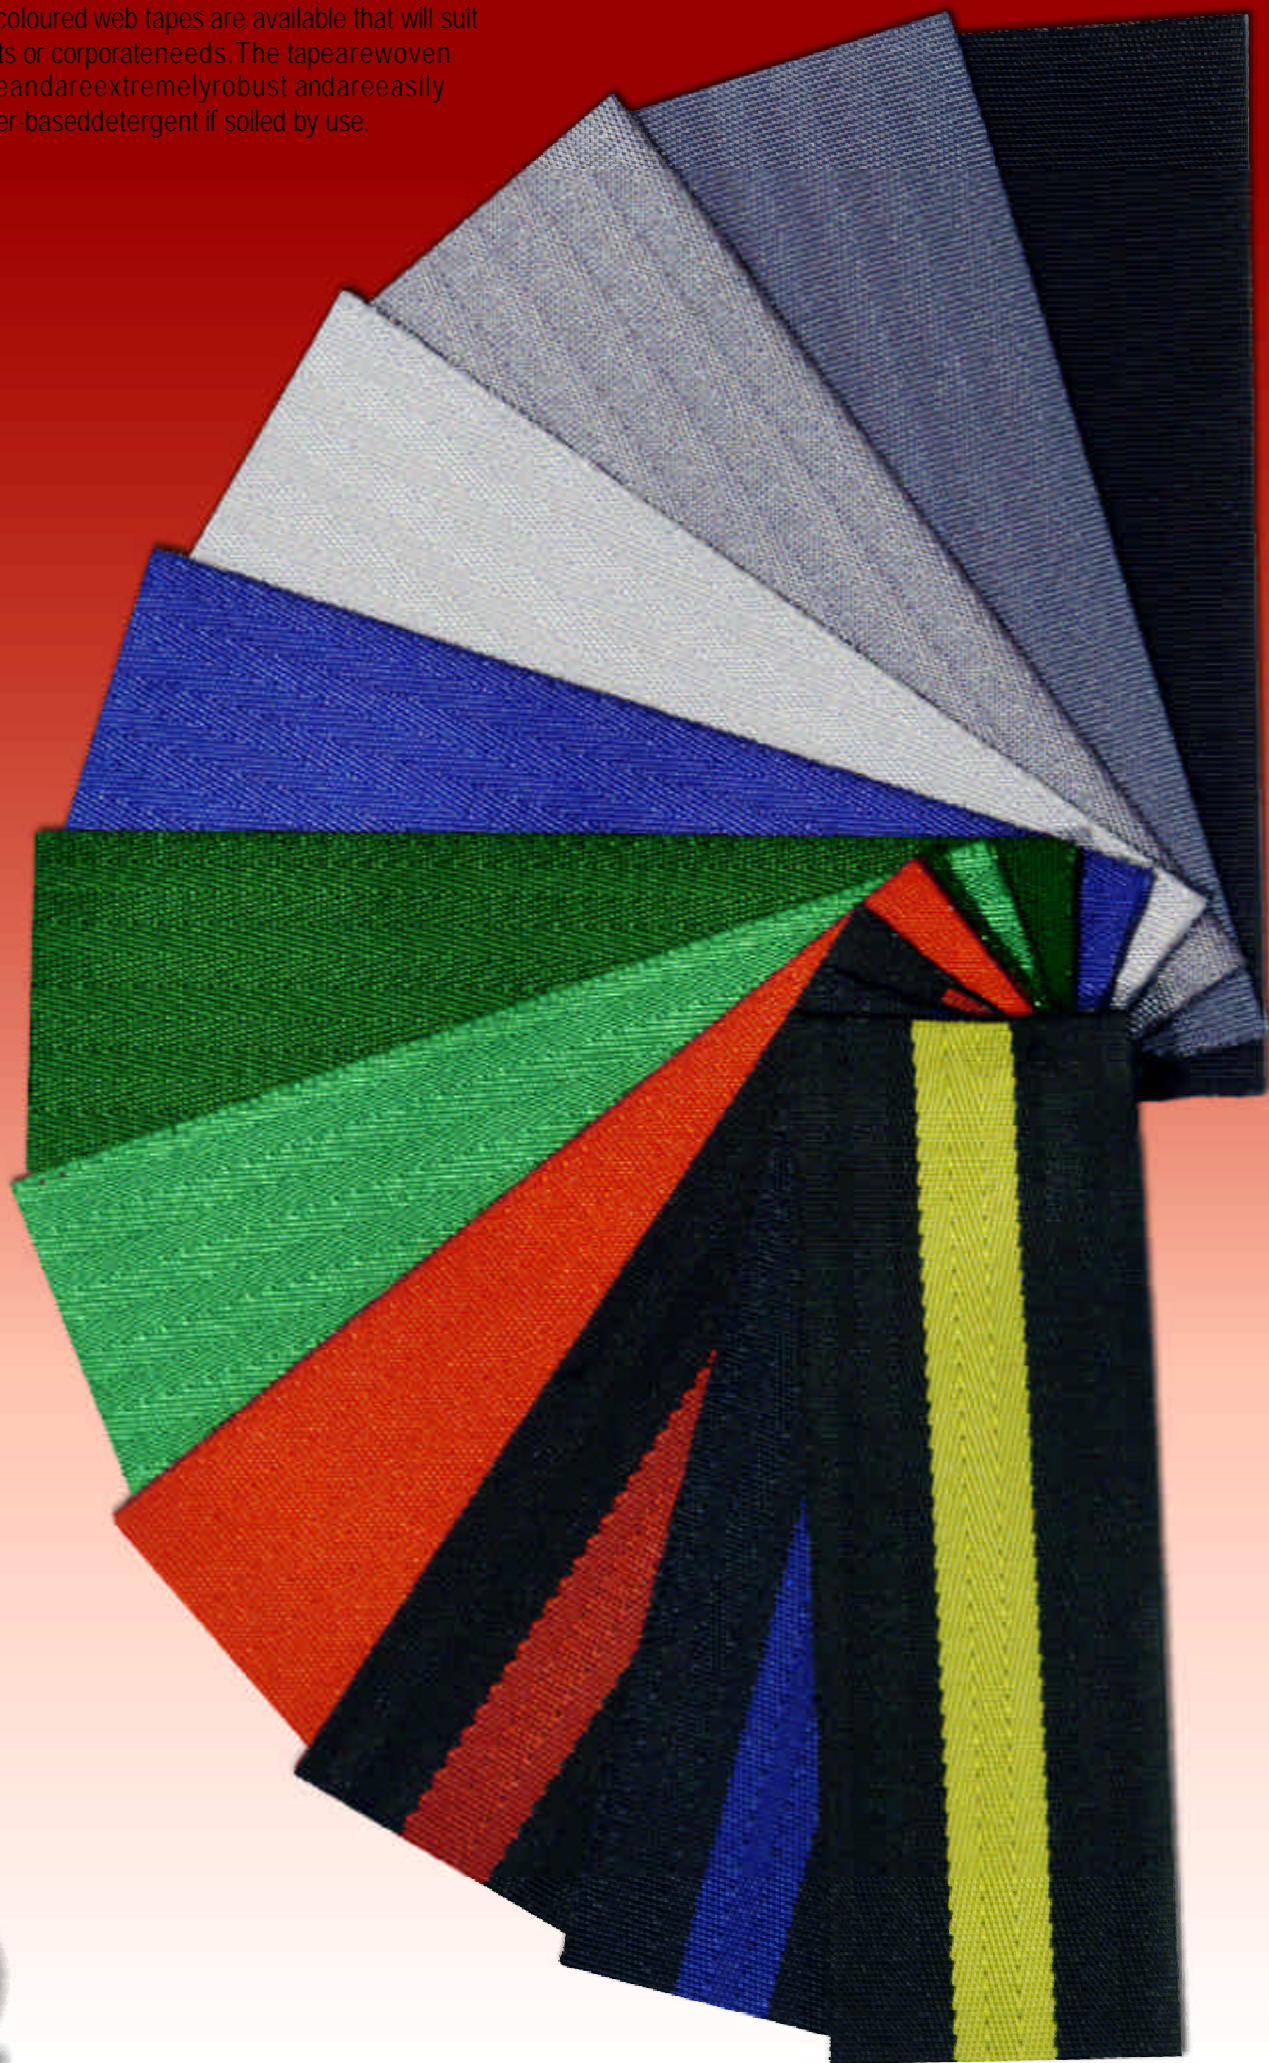

The Autobelt cassette mechanism has a five year guarantee and the poles are available all anodised colours in either in natural, bright or polished bright finishes.

"Q" Belt Post

"Q" systems range

A large range of coloured web tapes are available that will suit most requirements or corporate needs. The tapes are woven Nylon 48mm wide and are extremely robust and are easily cleaned with water-based detergent if soiled by use.

K E E "Q" &
F R A M E S

PRODUCT & SERVICE THAT'S ALWAYS ON "Q"

The Kee "Q" Auto Belt to our knowledge is the only locally manufactured system. This gives an advantage in both delivery and customizing options. As well as the colour option the belts can be customised with logos, messages or information giving a further dimension to the Auto Belt queue-system.

"Q" systems range

The barrier system for the "Q" Range of Poles are based on three options: two types of hooks or a key, these latching mechanisms can be used with a combination of ropes or chains and are dependant on the choice of pole.

Ferrule and hook chrome

Black ABS ferrule with key

Standard chain with key

Black ABS ferrule with hook

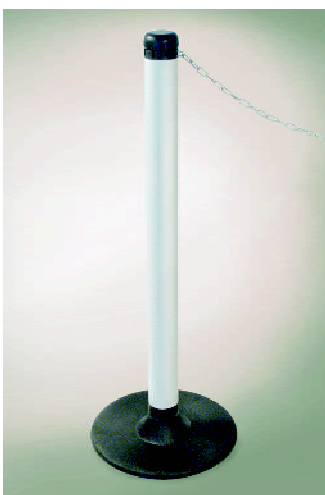

The Traditional Post uses hook and bank rope
The Auto Chain uses the key latching system exclusively. The clever design enables the chain to be stored in the pole, pulling out the length required to form a barrier and then locking the chain in place by screwing on the post cap.

The Auto Chain Post like the Auto Belt has the advantage of no loose or separate parts that can be mislaid. The chain is stored inside the post.

Bank ropes are available in a range of colours and represent an elegant solution to barring off, or restricting access to an area. Can be used with a range of posts and latching systems.

Spun Aluminum Auto Belt base.
All bases are of suitable weight the enhance stability and have anti skid and scratch rubberised stand off on the underside.

Standard base with leather grain ABS finish.

Spun mild steel base with chrome finish.

Leather grain ABS Auto Belt base.

Spun mild steel base with brass finish.

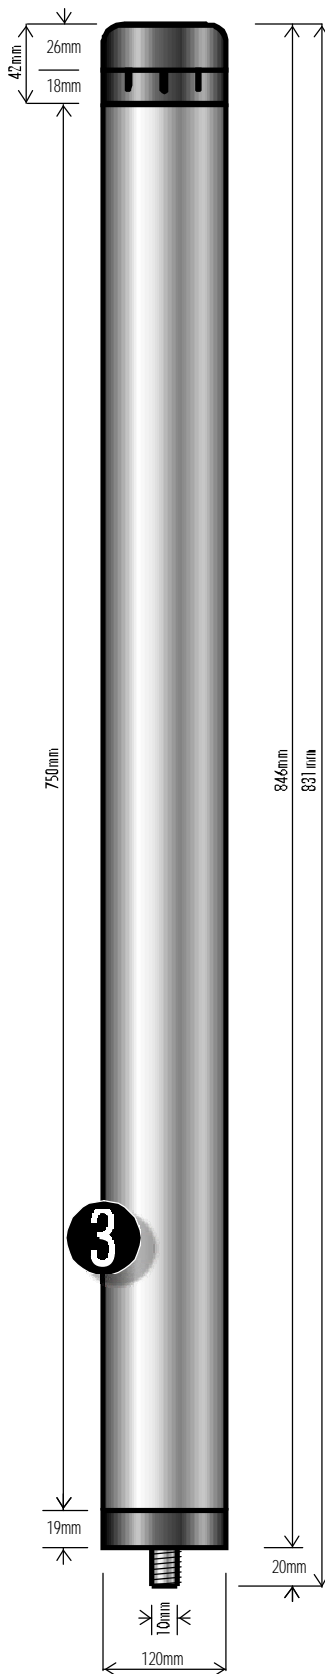

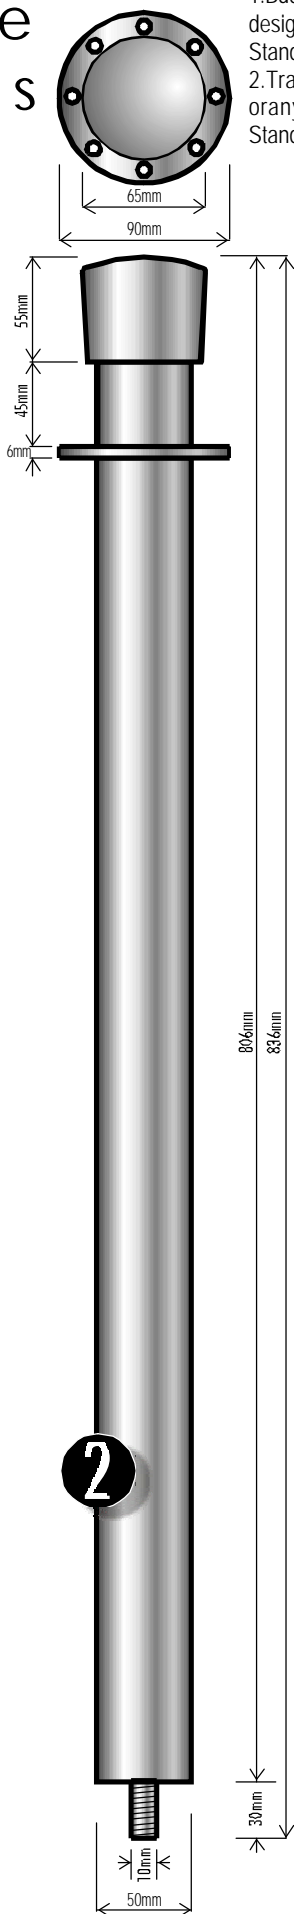

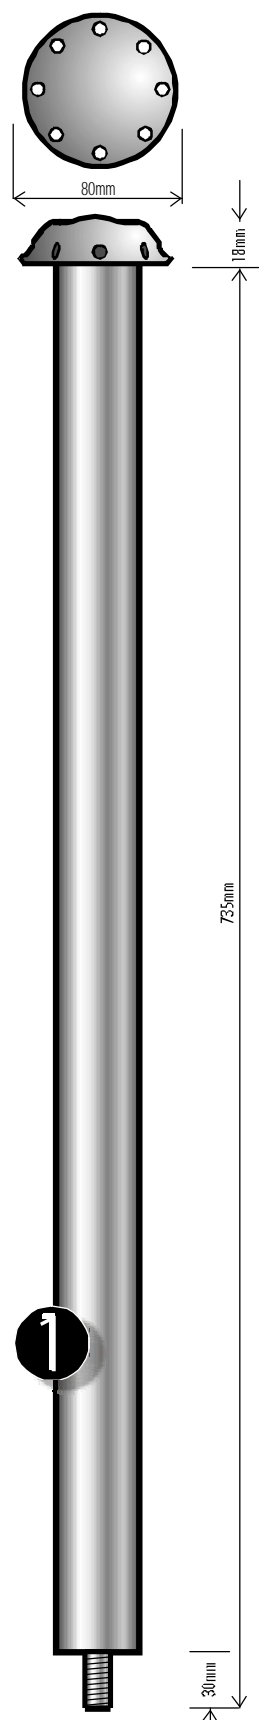

A detachable Slideframe can be used in conjunction with the belt post system. This is very useful for information or instruction to the public or it can be used as an advertising medium to a captive audience.

Also available using standard post or as freestanding "H" or "A" frame systems.
